The digibooster3.library has been released for MorphOS (on [MorphOS Files](#) and AmigaOS 4 (waiting in the upload queue of [OS4 Depot](#)). Version for M68k Amigas will be released in a few days and uploaded to Aminet. Later the download will be also available on [digibooster.de](#).

The library uses the same code base, and has the same API as static [libdigibooster3](#) (in fact it is linked with the static code), but is a regular Amiga shared library. Source code of the library is included in the archive, however libdigibooster3 is delivered as object file (one can checkout libdigibooster3 from GitHub and build it herself). The license is BSD. Developer material (includes, autodocs, examples) is in the archive as well.
