Hi out there!

The Installer script of the full version automatically installs die 68020 Version of the bsdsocket.library !

Not very helpfull when using Roadshow on a standard A500 with the PlipBox 😞

please fix the installerscript by asking wich version of the library should be installed

Thank you!

BTW: The Demo Version uses the correct bsdsocket.library!

Thank you! I'm currently working on a Roadshow update (what else could I be doing between Christmas and New Year's day? -- Roadshow was created over the Christmas holidays) and I'll be fixing the Installer script, too.
