ncafferkey write:

Week of January 1st:

- Fixed a crash in AHI prefs when there's no output available (hitchhikr)
- Fixed code corruption (corrupt taglists) caused by compiler optimisation quirks. This may have caused bugs in various places throughout AROS: it is known to have affected some DataTypes at least (neil)
- The French translations for system components were brought up to date (hitchhikr)
- Fixed a crash in the standard text editor that sometimes occurred while opening a file (hitchhikr)
- Fixed two visual glitches in Wanderer regarding the lasso and the headings in list mode (hitchhikr)
- An intermittent crash while starting the X Windows graphics driver was fixed (neil)

This overview has not yet been reviewed by the various AROS developers and is therefore to be considered as provisional. Corrections and changes can be found at:
