Desktop widgets are small individual utilities placed on your desktop and RNOWidgets is a single Hollywood application incorporating several of them. RNOWidgets contains widgets for calendar (ISO), analog clock, digital clock, notes, pictures (local and net), RSS feeds, sticker, and weather.

Main features of this update are:

- * New weather widget
- * New sticker widget
- * New alarm system

Other changes:

- * Widgets can be set to stay on top of other windows
- * Iconify options (menu item, ARexx, and startup)
- * Calendar: Switch back to the current month with MMB or Enter
- * Calendar: Scripts can be launched when clicking on dates
- * Calendar: ARexx commands for calendar event handling
- * RSS: Support for RSS enclosure element
- * RSS: Stripping of extra spaces in RSS texts
- * RSS: Added WArMUp and BoingsWorld Podcast RSS feeds
- * New example scripts for alarm and calendar
- * Incorrect compositing setting no longer leads to a crash
- * Other small changes

Check the RNOWidgets homepage for screenshots and download links.
