Amiga Explorer 7 released. This is a free update to all previous versions. Includes support for additional types of serial devices and ports, including COM port numbers higher than 9. Recognition of hardware where the speed cannot be set or changed (e.g. Bluetooth dongles). Enhanced support for high-DPI display modes. Added Offline option to the Amiga Explorer icon context menu (prevents undesired connection attempts). The Amiga Explorer icon is now also included in the "Network location" group of "This PC" namespace. Improved stability and handling of connection errors. Minor bug fixes. Unified 32-bit and 64-bit installer.
