The MUI for AmigaOS development team is proud to announce the immediate release of version 5.0-2018R3 of the Magic User Interface for AmigaOS4/PPC and AmigaOS3/m68k. Please find the release archives in our download section.

Like all former releases a keyfile is required to enable all available settings. Old keyfiles from MUI 3.8 can be used without any restriction.

Please note that MUI5 for AmigaOS3/m68k is definitely targeted at powerful systems with a fast CPU and a fast graphic board. Although it is still possible to run this release on a real 68k machine an emulation like WinUAE is very highly recommended. Also colormapped screens with 256 colors at most are still supported, but MUI5 makes heavy use of fancy truecolor images and effects which cannot be provided on colormapped screens with the full range of possibilities.
