Andrzej Rogozynski from CS-Lab (Poland) has released a video on his YouTube channel showing an accelerator board for the Amiga in action. This "Warp1260" called accelerator is still in development. As it is mentioned in the video details the board has a MC68060 CPU with 50 MHz. You can see an Amiga 1200 running with this accelerator in the video.

We reported on the [announcement of these cards on October 23, 2018](#).
