22.05.2019 Individual Computers: Buddha Flash Software updated

<https://icomp.de/shop-icomp/de/newsreader/items/buddha-flash-software-update.html>

There is an update of the Firmware for the Buddha Flash IDE controller which fixes a bug which under certain circumstances caused that especially large partitions could not be created or used correctly when exceeding the 32-bit limit.

Another error prevented data from being overwritten by the first error.

Both bugs were fixed in version V52.101 of May 6, 2019.

The new software can be used with all Buddha controllers shipped since 1997. For controllers shipped before 1998, an EPROM programmer is required.

The Flash update process is described in detail on a separate wiki page:

[http://wiki.icomp.de/wiki/Buddha\\_flashing](http://wiki.icomp.de/wiki/Buddha_flashing)

New Buddha flash "Anniversary edition" controllers are in production and will be available by mid-June at the latest. From now on we accept pre-orders again.
