A-EON Technology Ltd is pleased to confirm immediate download available of the Enhancer Software 1.5. This is the sixth public release and can be downloaded for free using the Updater tool for existing Enhancer Software owners. All three variants of the Enhancer Software have been updated: Plus, Standard and Special Edition.

Many updates have been implemented in version 1.5, both major and minor bringing the package to higher standards.

* Warp3D Nova and OpenGL ES 2 library have had major updates including significant work towards enabling the recent GL4ES wrapper and game ports to work

* MultiViewer: if Warp3D Nova is available, it is now used for 2D image rendering and processing. This means that the old Picasso96 graphics system is no longer used by MultiViewer for rendering 2D images so the entire range of video memory on the graphics card can be used by MultiViewer.

What has changed in this release?

Commands

SystemReboot v53.7 (updated)

Devs

HDAudio sound driver v6.23 (added)

Datatypes

Logfile datatype v53.5 (updated)

Gadgets
